

**Temporary
Buildings.
Endless
Possibilities.**

fewsindustrial

Innovation Everywhere

Fews is a family business and headed up by Ian Few, who brings with him 20 years' experience of supplying buildings to businesses, the public sector and major events throughout the UK and Europe.

Backed up by a team of experienced project managers, site managers, foremen and installation crews, the business has grown to become one of the foremost UK-based companies.

Fews brings to market a range of high quality temporary buildings to provide cost effective turnkey solutions for a range of uses whether that be seasonal storage, temporary warehousing & storage, logistic canopies, emergency cover and much more.

Based in Worcestershire UK, the company is perfectly positioned to service businesses nationwide as well as mainland Europe, and offer a personal service, free site appraisals and fast response times.

Temporary Buildings Built to Last

Service

We offer an exceptional service and will strive to find the perfect temporary building for your business with our proactive and personal approach. Each customer request is led from enquiry to build by one of our expertly trained project managers ensuring continuity and a seamless process. We understand the need to react quickly in some situations, so our processes allow the fast turnaround of projects. Site visits are essential, free and without obligation.

We can also advise on specialist services for Finance Options, Site Scanning, Ground Works and Planning Permission.

Fast Installation

If your requirement is urgent, we can assemble a 1000sqm capacity building within 24 hours. We hold significant stocks and will advise on the turnaround time in each case.

Turnkey Solutions

We are experts in the temporary structures industry and we can offer full turnkey solutions for a variety of applications. Beyond the structure, we can include lighting, heating, air conditioning and power distribution if required.

Maintenance

Maintenance contracts are available (whether you hire or purchase) to ensure your building remains in a safe and fully operational condition.

Why Fews Industrial?

“

We've been at the forefront of temporary buildings since 1998 and we haven't stood still since ”

Safety

In conjunction with independent industry specific consultants we have created robust and detailed documented safe systems.

From our overall policies to method statements for different structure types, risk assessments for hazardous activities and documented inspection systems of our equipment, you can be sure that our tried and tested systems can be relied upon. In addition, our crews are trained in H&S procedures and wear appropriate PPE at all times.

All of our buildings can have site specific structural engineering calculations.

Environmental

Wherever possible we look for ways to adopt sustainable working practices. In the last 5 years we have installed a comprehensive biomass system to heat our warehouse and offices, including the supply of hot water. Recently, we further extended our commitment to the environment by introducing solar power to generate electricity.

When coming to the end of their use, our buildings can be fully re-used or relocated. Over 90% of materials can be recycled at the end of their life making them an environmentally sustainable proposition.

Coverage

We have nationwide coverage and beyond if required, so our temporary buildings are available to hire or purchase anywhere in the UK and mainland Europe.

Why Temporary Buildings?

Our temporary buildings are faster to install and are a cost-effective alternative to a traditional construction.

Cost Savings

It is possible to achieve up to 70% cost savings when hiring a temporary building when compared to a permanent building.

Speed

A temporary building can be erected in just a few days, giving you the additional on-site space without the need for groundworks or the inconvenience and business disruption of hiring off-site space.

Flexibility

Modular structures provide the most flexible method to create a new building. We stock structures in 5m bay increments along the width and length. If this doesn't work for your size, we can build a bespoke solution at any size. We can design, install and sell a solution, or hire over a period of time to suit your needs. As your business requirements evolve, you have the choice to buy, modify, relocate or even dismantle your temporary building.

Risk Management

In uncertain times, a temporary building is a lower risk option than constructing a permanent facility.

On Budget.
On Time.
Every Time.

Sectors

Industrial

- Warehousing
- Manufacturing
- Chilled Storage
- Logistics
- Emergency Structures

Retail

- Automotive Showrooms
- Shops & Restaurants
- Refurbishment
- Disaster Recovery & Emergency Structures

Sport

- Sports Halls
- Training Facilities
- Gyms
- Ice Rinks

Other

- Education
- TV & Film
- Temporary Venues
- Agricultural

Our Products

Constructed from high grade aluminium and steel, our temporary buildings are engineered to withstand high loads from wind, snow and rain, and are designed to last many years.

We use fire retardant, durable PVC for the roofs and can fit a variety of wall and roof styles whether you need additional security or enhanced insulation.

Our buildings can be specified in any size. Typically, we offer up to 8m eave height, and any width or length in 5m bay increments.

However, this is not a limitation on what can be designed and built if something different is required to suit your site.

Ground Preparation & Fixings

The best base for any building is a new or existing concrete pad. That said, we can build on a variety of surfaces and will adapt our fixings as appropriate.

All our buildings are wind and snow loaded to BS6399.

Single Skin Steel Walling

Double Skin Insulated Roof

Non-Insulated Buildings

A cost effective option with excellent weather protection, ideal for storing less temperature sensitive goods or equipment.

The roof is made from single skin PVC and the walls are either PVC or corrugated sheet steel for greater security. The main framework is made from aluminium with steel connecting joints.

Single Skin PVC
Roof & Walls

Part-Insulated Buildings

The ideal solution when the stored products are not temperature sensitive but can be damaged by condensation.

Standard single skin walls with a thermo roof will eliminate condensation, giving your stock the required level of protection, especially if you are storing products packaged in paper or cardboard.

Insulated Sandwich
Panel Walling

Solution Includes Internal Insulated Lining - See Below

Insulated Buildings

Our fully insulated buildings are fitted with a combination of inflated thermo roofs and gables, and insulated walling.

This combination eliminates condensation build up and is ideal where temperature control is required for either storing temperature sensitive goods or where personnel are expected to work within the building.

Thermo Roof Pump

Thermo Roofs and Gables

A unique and innovative addition to temporary buildings, the thermo twin-skin PVC is an air-filled roof which uses an electric pump system to maintain a constant inflation. This roof system eliminates condensation internally and enhances thermal insulation.

Super-Insulated Buildings

When the goods you are storing must be kept within a very low temperature range, we can supply buildings with an enhanced level of insulation.

In addition to insulating the outer roofs and walls, we can fit thermal linings using a 21 no. layer multifoil insulation to create a near airtight seal.

Super Insulated Lining

Insulated Walls

We use insulated sandwich wall panels with a closed cell building that produces a very high insulation value and ensures very low water vapour permeability. The closed cell structure also prevents the core from absorbing water. These panels help maintain consistent internal temperatures.

Accessories

Personnel Doors

For safety, security and ease of use, we can fit our temporary buildings with steel, locking personnel doors with emergency exit bars.

Sliding Doors

A cost-effective solution to allow a large opening into buildings (e.g. for forklift/vehicle access). These can be clad in either insulated or non-insulated panels.

Roller Shutters

Ideal for temporary warehousing and loading bays, we offer both high and low usage roller shutter doors with manual or electric operation which are ideal for busy sites where quick and easy access to the temporary buildings is needed. In addition, we can supply high-speed roller shutter doors.

Flooring

Should a concrete pad or hard standing be unavailable, we can supply a level, integrated floor solution. This can be designed to withstand weights of several tonnes.

Guttering and downpipes

The British weather is very unpredictable so to ensure our temporary buildings can withstand the amount of rain they'll be exposed to, we can fit our buildings with industrial grade guttering and downpipes to ensure water is drained properly from the roof of your building and away from the site.

Lighting

For some applications we can specify energy efficient LED lights, emergency exit and flood lighting. We can also install power distribution and sockets, connect mains power or supply temporary power solutions. All of which is signed off by a qualified electrician.

Heating & Air Conditioning

Should your building need to be heated or cooled, we can design a system that is integrated to the building specification and layout, providing the most efficient solution in terms of ongoing fuel costs and minimising the intrusion of floor and wall space.

Remote monitoring and telematics can be added for peace of mind.
